## **8Dio Adagio Violins Vol 1 V10 KONTAKT \_\_LINK\_\_**

since i'm writing this review, the company has announced a third adagio violins vol. 1, which adds a seventh string and a lower 'dark' articulation. the fourth volume seems to be on the way as well, which should make for an interesting future. as is tradition, the files in each section of the library contain.cdr and.kli files, a wav file of the premixed stereo master, as well as a single.kli file for each articulation. the violins in all four sections of the library contain seven articulations, including the following: up to 16 violins can be tracked simultaneously and the interface allows you to switch between them without ever dropping a note. another addition is the program now includes 80 different articulations. this library is a true leap forward in adagio's sound engine. while its not perfect, it does represent a great start and a huge improvement over the lackluster previous adagio releases. with the latest update to adagio, the instrument library has been completely re-programmed from the ground up. while there have been several previous versions of this library, this is the first time the sound engine has been completely re-worked since its original release in 2004. with this update, adagio is capable of a more realistic and satisfying sound thanks to the addition of new sampled strings, pizzicato and articulations, allowing the violins to play with the most realistic sound possible. the added articulations range from from very subtle vibrato, to full-bodied legato, allowing you to achieve any kind of sound desired. 8dio includes around 30 violin ensemble samples, and also has a number of 'mini' patches that you can use as substitutes for the full ensemble. there are separate patches for solo violin, for solo cello, for solo viola, and for solo 'cello or 'viola. these are all based on the same basic 'ensemble' framework, which means that they do not differ in terms of instrument, but in the rhythmic disposition and articulation of each sample. the solo instruments are primarily for 'choreographing' your track: you may use them to create dramatic entrances and exits from your music, or to emphasize sudden entrances or changes of key. the cello sample, for instance, starts playing a solo line only after the violin sample has performed several beats; the viola sample then adds a heavier articulation, and the 'cello sample repeats the previous two notes. the patch for the solo violin and the solo 'cello are both very basic; they are just a pair of single notes played slightly off-beat.

you can find a comprehensive list of all the patches included in this download in a text file called 'samplelist.txt' that's located inside the zip archive. all the patches are recorded at 96bpm in 24-bit wav format, but you can also use them at any tempo you like. i used all the patches in the set at the samptime of this review, and i could recommend them without hesitation. if you intend to use them in your own music, you can copy the files directly into your project, but if you plan to sample them in the near future, you can save time and bandwidth by using the 8dio multi-track sampler plugin. once installed, the plugin enables you to cut and paste the samples into any track in your project. and since the samples are basically variations on a theme, any minor imperfections can be eliminated by saving the project and then starting over, re-copying the samples to a new track. 8dio's collection of violin ensemble samples comes in 3 different 'series', starting with the 'adagio' series that's made up of the 30 patches that are discussed in this review. the second series is the 'legato' set, which includes a number of improvised variations on the full-featured adagio patches. the 'string instrument'

series contains patches that are intended for guitar, cello, viola and even flute. as its name suggests, the 'legato' series, like the adagio series, can be used to create a rhythmic bassline, and you can imagine all sorts of interesting ways to combine them. if you like the sounds that colin o'malley and troels broch hansen have created with their adagio patches, you'll find them to be a very effective way to exercise your rhythmic imagination. 5ec8ef588b
